A perturbative criterion for ergodicity of quantum lattice systems

Speaker: Gustavo Posta - La Sapienza, Roma

Time: Wednesday June 3, 13:00-14:00

Location: Room B308, Largo S. Murialdo 1 (Roma)

We analyze a class of quantum Feller semigroups describing the evolution of quantum interacting systems on a lattice. By regarding this evolution as a perturbation of a non-interacting dissipative dynamics, we obtain a purely dynamical quantitative criterion that implies uniqueness of the stationary state and exponential convergence of local observables.
